

**Wire wound resistors****WWR 1W/2W/3W****FEATURES**

- High power dissipation in small volume
- High pulse load handling capabilities.

**APPLICATIONS**

- Ballast switching
- Shunt in small electric motors
- Power supplies.

**DESCRIPTION**

The resistor element is a resistive wire which is wound in a single layer on a ceramic rod. Metal caps are pressed over the ends of the rod. The ends of the resistance wire and the leads are connected to the caps by welding. The resistor is coated with a brown or green silicone lacquer.

| TYPE   | Dimensions (mm) |            |             |              |
|--------|-----------------|------------|-------------|--------------|
|        | D<br>±0.8       | L1<br>±0.8 | L 2<br>Max. | d<br>(±0.05) |
| WWR 1W | 4.0             | 9.0        | 11.0        | 0.7          |

**Note**

1. the maximum voltage that may be continuously applied to the resistor element, see  
“IEC publication 60 115-1”

The maximum permissible hot – spot temperature is 350°C.

**Derating curve**

The power that the resistor can dissipate depends on the operating temperature : Fig. 1

**Fig. 1 Maximum dissipation ( $P_{\max}$ ) in percentage of rated power as a function of the ambient temperature ( $T_{\text{amb}}$ )**
